Manufacturing

EXCELLENCE AS STANDARD

We produce directly at our German production sites in Chemnitz and Langenwetzendorf. On the one hand, because a highly qualified and perfectly tuned team goes to work here every day. On the other hand, because from here, we can best fulfil our own standards of quality, adherence to schedules and supply availability.

Quality

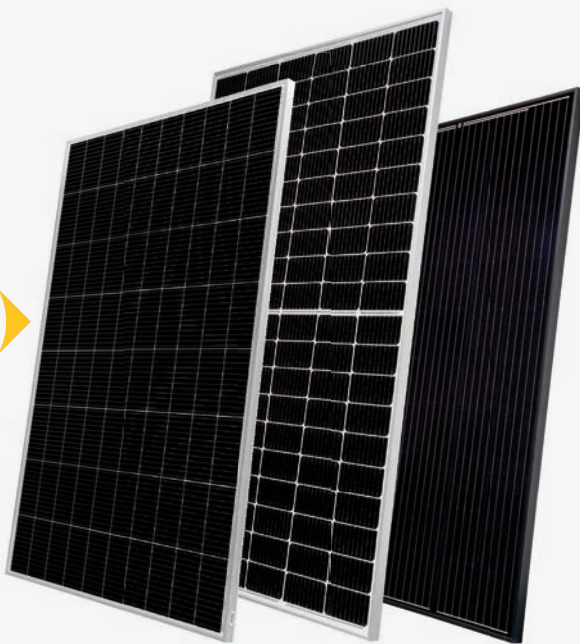

CONSEQUENTLY HIGH QUALITY

We produce the crystalline high-performance modules using certified materials by leading manufacturers.

Our modules are certified by the VDE according to the latest IEC(EN) standards & are equipped with the corresponding design and safety certifications. All modules are in compliance with the CE and have passed successfully the Salt Mist and Ammonia Corrosion testing.

All of this reflects the product quality that gives us the opportunity to grant a 15-year product warranty.

Highly efficient solar modules NeMo®
with power of up to 400 Wp

Service

CLOSER

Independent, family-run and responsible: We achieve the highest quality through short distances, quick decisions and thanks to a highly qualified team.

Get the most out of your Heckert solar modules – systematically. We can offer you the right components to fully exploit the power of your high performance modules. This ranges from the inverter to assembly and connection accessories and wallboxes to a comprehensive, long-lasting storage solution also available for existing PV installations.

We work exclusively with branch leaders.
